

Intumescent fire protection coating

Nullifire

Benefits:

Thanks to its rapid curing, the product offers effective fire protection for steel and metal components up to a fire resistance of 120 minutes.

The product begins to expand when heat is applied (from approx. 130°C) and therefore creates thermal insulation.

The product from Nullifire is a one-coat system that can be applied quickly and in large quantities.

- layer thicknesses of 0.5 - 1 mm are already sufficient
- low VOC content (based on a patented technology)
- the coating is repairable
